

Rover Juliann Gutierrez

U.S Citizen | Sacramento, CA | 480-304-1377 | rovergutierrez007@gmail.com | rj-gutierrez.vercel.app

TECHNICAL SKILLS

- **Languages:** Python, C++, Java, JavaScript, TypeScript, PHP, Html / CSS
- **Technologies:** Node.js, Next.js, React, RestAPI
- **Developer Tools:** MySQL, Supabase, Git

EDUCATION

Bachelor of Science in Computer Science

Graduated: Dec 2025

University of Arkansas, College of Engineering | GPA 3.35

Relevant Coursework: Programming Foundation I and II, Operating Systems, Paradigms, Software Engineering, Computer Networks, Algorithms, Machine Learning, Artificial Intelligence

PROJECTS

StudyBreak-Bite

Winter 2026 - Present

- Architected a campus-focused food pickup/delivery application using JavaScript, React Native, and Node.js to reduce student wait times during short study breaks by estimating order departure timing.
- Designed backend data models and authentication flows using Appwrite/Firebase-style services to manage users, restaurants, and order lifecycle states.
- Integrated Appwrite REST APIs for user authentication, database CRUD operations, and session management.

Pottery Website

Fall 2025

- Architected a full-stack sales management web application using Next.js with Typescript to track products, sales, and customer data.
- Implemented a Supabase backend to handle database storage, authentication, and image uploads to enable secure data persistence and simplified backend management.
- Built a relational database schema using Supabase (PostgreSQL) to manage product and sales data

License Plate Recognition Machine Learning Model

Spring 2025

- Built a license plate detection system using Python and PyTorch, utilizing a Transformer-based DETR model with a ResNet-50 backbone for end-to-end object detection.
- Applied computer vision preprocessing pipelines (image normalization, resizing, tensor conversion) to prepare raw images for deep learning inference.
- Transformers to load a pretrained DETR model and perform image preprocessing, inference, confidence thresholding, and bounding-box visualization.

Photon Project

Spring 2025

- Architected a real-time multiplayer laser tag application system using a client-server architecture in Python to support concurrent player connections and live gameplay.
- Implemented custom networking protocol using Python sockets to transmit player actions, scores, and game state updates, ensuring consistent synchronization across clients.
- Applied Agile methodologies, including sprint planning, task breakdown among the team, and iterative feature development to coordinate team contributions and deliver functionality incrementally.

EXPERIENCE

Operation Intern, PAM Transport

Fall 2022 – Fall 2025

- Utilized Walmart Retail Link to retrieve load assignment details to build and support planning.
- Created accurate Power BI reports to provide actionable insights for customers.
- Assisted load planners by building driver assignment to ensure timely and efficient deliveries.

AWARDS

Association for Computing Machinery (ACM)

Fall 2024 – Fall 2025

- Actively participate in meetings, workshops, and volunteering events related to programming.

Military Dependent Scholarship (MDS)

Fall 2022 - 2025

- Awarded for academic merit as a dependent of a military service member.
