U.S Citizen in Sacramento, CA

TECHNICAL SKILLS

- **Languages:** Python, C++, Java, JavaScript, TypeScript, PHP, HTML / CSS
- **Technologies:** Node.js, Next.js, React, REST API, MS Word, Excel, PowerPoint
- **Developer Tools:** MySQL, PostgreSQL Supabase, Git

EDUCATION

Bachelor of Science in Computer Science

Graduated: Dec 2025

University of Arkansas, College of Engineering | GPA 3.35

Relevant Coursework: Programming Foundation I and II, Operating Systems, Paradigms, Software Engineering, Computer Networks, Algorithms, Machine Learning, Artificial Intelligence

PROJECTS

Aura-Drip

Winter 2026 - Present

- Engineered a full-stack wardrobe management and outfit recommendation app to help users digitize their closets and generate personalized outfits, resulting in a modular React + TypeScript frontend integrated with an Express/TypeScript REST API.
- Developed secure authentication and user-specific wardrobe workflows to ensure private, persistent data access, enabling users to sign up, upload item images, manage favorites, and perform CRUD operations through Supabase Auth, Storage, and protected API routes.
- Architected a PostgreSQL schema and recommendation pipeline to improve outfit personalization, resulting in a Prisma-backed system that interprets natural language prompts, ranks clothing items across multiple attributes, and returns outfit suggestions with Artificial Intelligence reasoning.

StudyBreak-Bite

Winter 2026

- Architected a campus-focused food pickup/delivery application using JavaScript, React Native, and Node.js to reduce student wait times during short study breaks by estimating order departure timing.
- Designed backend data models and authentication flows using Appwrite/Firebase-style services to manage users, restaurants, and order lifecycle states.
- Integrated Appwrite REST APIs for user authentication, database CRUD operations, and session management.

Machine Learning Model for CS Income & Expense Prediction

Fall 2025

- Developed a supervised regression model to predict financial outcomes, using Python and structured income/expense datasets to analyze patterns and generate forecasts for improved financial insight
- Performed data preprocessing and feature engineering by cleaning missing values, normalizing variables, and exploring correlations, improving model stability and reducing noise in predictions
- Optimized regression model performance by tuning hyperparameters, achieving a 15% reduction in Root Mean Square Error (RMSE) on financial test datasets.

License Plate Recognition Machine Learning Model

Spring 2025

- Built a license plate detection system using Python and PyTorch, utilizing a Transformer-based DETR model with a ResNet-50 backbone for end-to-end object detection.
- Applied computer vision preprocessing pipelines (image normalization, resizing, tensor conversion) to prepare raw images for deep learning inference.
- Transformers to load a pretrained DETR model and perform image preprocessing, inference, confidence thresholding, and bounding-box visualization.

EXPERIENCE

Operation Intern, PAM Transport

Aug 2022 – Nov 2025

- Used Walmart Retail Link to gather load and scheduling information, helping coordinate deliveries and reduce communication delays between dispatch and customers.
- Created accurate Power BI operational data into structured reports, reducing the time managers spent manually compiling information.
- Collaborated with cross-functional logistics teams to identify data discrepancies, resulting in an increase in load assignment accuracy.
